

PURGENVENT™

Model 7930ECA

QUALITY COMPONENTS FOR FIRE SPRINKLER SYSTEMS

Automatic Air Venting Valve with Pipe End Cap

The AGF PURGENVENT Model 7930MAV Automatic Air Venting Valve is designed to remove excess air from wet pipe fire sprinkler systems to help mitigate internal pipe corrosion. NFPA 13 standard requires the addition of an air vent on all wet pipe fire sprinkler systems that utilize metallic pipe.

The PURGENVENT Model 7930MAV features a FM approved and UL listed 7900V automatic air vent that releases excess air while the system is in operation. It also includes a pipe end cap, isolation valve, strainer, and purge valve with union and hose connection. The purge valve helps remove air from the system faster when filling, helps flush and clean the valve, and can be used as a vacuum break when draining the system. When being used as a vacuum break it helps drain the system faster and protects gaskets from being dislodged on other system components. AGF recommends installing the valve at the end of system branch lines.

Features

- NFPA Compliant
- FM Approved and UL Listed 7900V Air Vent
- 175 PSI Rated
- Isolation Valve
- Internal Strainer
- Purge Valve with Union and Hose Connection
- System Drain Vacuum Break
- Pipe End Cap for Easy Installation

7900V Air Vent Advantages

1. Conical shape maximizes clearance and protects the venting valve from contamination.
2. Recessed venting valve prevents vent redundancy and protects it from damage.
3. Single float allows only vertical movement.
4. Bubble breaker acts as a secondary filter and maximizes air passage.
